

Artemy Urodovskikh

Moscow, Russia

slacky@ya.ru · Telegram: @R2BPW · github.com/R2BPW · r2bpw.works

Engineer at the intersection of software and hardware.

Eight years building the backend of a regional-scale waste-management platform (Python/Django, PostgreSQL, ClickHouse): billing for 1M+ users, vehicle routing across regions of Russia and Kazakhstan, fleet telemetry, and document workflow for government and international B2B clients.

Side projects: a price-intelligence bot monitoring ham radio markets in 50 countries; an SDR receiver written from scratch in C and Verilog.

MIPT, MSc in Computer Science. Thesis on visualization algorithms for large-scale route data on maps.

Professional Experience

Backend Team Lead — Bolshaya Troika, Moscow

May 2018 – present · 8+ years

Teaching assistant at MUCTR (2020), MIPT (2022), and Yandex.Practicum (2023–2024). Authored an IPSec/IKEv2 VPN lab guide for MIPT (MikroTik, Libreswan, PKI). Cisco CCNA.

Core product for waste management logistics at regional scale (Moscow Oblast). Government contracts, international B2B clients.

Billing engine for 1M+ users. Route optimisation algorithm.

Configurable document workflow engine with programmable semantics and versioning, adopted by international B2B clients for regulatory reporting. Vehicle telemetry across the regional fleet. Frontend and backend i18n.

Refactored shared codebase (40+ developers), introduced code review, owned releases and rollbacks.

Projects

Radio Bargain Bot

Price-intelligence system for the secondary ham radio market. Aggregates listings from 98 sources across 50+ countries, scores each deal using Bayesian bootstrap benchmarks, publishes verified bargains to 12 regional Telegram channels.

More Fun to Receive — Custom SDR Receiver on FPGA

Custom SDR receiver firmware for Xilinx Spartan-6 (OSA103 Mini), written from scratch in C and Verilog: NCO, hardware-multiplier mixer, decimating CIC filter.

IR Bridge — Ericsson MC218 ↔ Flipper Zero ↔ LLM

Bidirectional infrared bridge from a 1999 Ericsson MC218 palmtop to a large language model. Flipper Zero decodes IrDA and relays via ESP32 to an LLM API. No cables, no IrDA stack.

30m QRSS Beacons

Catalogue of identified QRSS beacons on the 30-metre band, built on a distributed and continuously updated network of KiwiSDR receivers worldwide, selected for favourable propagation conditions.
